PROFESSIONAL SUMMARY

Final-year MCA student seeking a Java backend internship. Built and deployed a distributed job scheduler (concurrent workers, retries, Dead Letter Queue, stale lock recovery) and a JWT-secured e-commerce backend moving from monolith to microservices, using Spring Boot, REST APIs and MySQL. Hands-on with Java concurrency, Spring Security and backend deployment on Render, and practise data structures and algorithms regularly (arrays, linked lists, dynamic programming).

EDUCATION

Master of Computer Applications (MCA) CGPA : 8.34 (through 2nd semester) 2025 – 2027
Maulana Azad National Urdu University, Hyderabad

Bachelor of Computer Applications (BCA) CGPA : 6.57 2022 – 2025
Shibli National PG College, Azamgarh

TECHNICAL SKILLS

Languages: Java (Core Java, OOP, Collections, JDBC), SQL, C, JavaScript, HTML5, CSS3

Backend: Spring Boot, Spring Security, Spring Data JPA (Hibernate), REST APIs, JWT, Microservices basics, OpenFeign

Frontend: React, Vite, Tailwind CSS

Database: MySQL

Core Concepts: Data Structures & Algorithms, Multithreading (ExecutorService, Semaphore), System Design Basics

Tools & Deployment: Git, GitHub, Postman, Swagger, vercel, Render, IntelliJ IDEA, VS Code

PROJECTS

Distributed Job Scheduler

Java, Spring Boot, MySQL, React, Vite, Tailwind CSS, REST APIs | Deployed on Render

- Built a scheduler where users create jobs and the scheduler assigns eligible jobs to available worker execution slots, with full job status management.
- Implemented concurrent job execution using Java ExecutorService and Semaphore.
- Added a retry mechanism and a Dead Letter Queue for jobs that fail repeatedly.
- Implemented stale lock recovery to detect and recover jobs stuck in the running state after worker failures.
- Built a React, Vite and Tailwind CSS dashboard to monitor jobs, workers and failed tasks.
- Deployed the backend on Render, connected to a hosted MySQL database.

E-Commerce Backend System

Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, MySQL, JWT, Swagger

- Built REST APIs for user registration, authentication, product management, cart management and order processing.
- Implemented JWT-based authentication with Spring Security, input validation and global exception handling; documented the APIs with Swagger.
- Started with a monolithic architecture, then began splitting it into independent services to understand how large applications are divided.
- Explored service-to-service communication using OpenFeign and API Gateway architecture.

PROBLEM SOLVING

- Practise algorithmic problems on competitive programming platforms, focusing on arrays, linked lists and dynamic programming.
